

InnoVention

Your ideas. Engineered.

InnoVention is a prototyping competition hosted by the NYU Entrepreneurship & Innovation Association and supported by Future Labs and Tandon School of Engineering. The competition challenges student-led teams to validate, prototype and pitch commercially viable technology ventures that solve global problems.

With an emphasis on prototyping, the initiative uniquely adds to the university's entrepreneurial ecosystem working with well with NYU Summer Launchpad pre-accelerator and the Stern \$300k challenge. Ultimately, the InnoVention infrastructure provides ideation, education, mentorship and funding, leading student entrepreneurs to start and take their ventures forward.
