

Nikolai Wolfe

Class of '09 Civil Engineering

Currently serving as Executive Council Member for the PIAA, Nikolai Wolfe is excited to extend his commitment to serving his fellow alumni and the interests of the university by joining the International Board of Directors. As a recent alumnus, Nikolai understands the importance of connecting the diverse and dynamic community of NYU-Poly graduates who share a passion for moving the legacy of their alma mater forward. As a member of the Board of Directors, Nikolai will help ensure the PIAA increasingly remains that nexus.

Nikolai holds both a B.Sc. Civil Engineering in 2009 and a M.Sc. Civil Engineering: Urban Systems Engineering & Management in 2011. For Nikolai, the Polytechnic School of Engineering represents more than a pioneering research university. It is a cradle of innovation whose holistic approach to learning and demonstrated dedication to student development prepared him to successfully meet the challenges of an ever-evolving social and professional landscape.

During his undergraduate tenure, Nikolai played a central role in helping transform the culture of student activities on campus. Along with being a Senior Peer Counselor and Orientation Leader, Nikolai served three consecutive terms as President of the Programming Advisory Board. His continued involvement afforded Nikolai unique insight into the operations of multiple university departments and organizations. This perspective increased Nikolai's sensitivity to the needs of the NYU-Poly community and allowed him to foster lasting relationships with its members. Nikolai continues his involvement in student activities as a mentor to new student leaders. As a graduate student, Nikolai benefited greatly from working with his international student peers and looks forward to expanded opportunities with this new role.

Upon graduation, Nikolai became a Management Associate in Con Edison's rigorous and highly selective eighteen-month leadership development program. Nikolai has since graduated the program and is now an Operating Supervisor for Manhattan Electric Construction, where he oversees the execution of maintenance and resilience programs, as well as emergency response initiatives for Manhattan's underground electric infrastructure. Nikolai remains committed to community service and spends most weekends dedicating time to service in Con Edison's Volunteer Corps.

Nikolai has most recently be selected to participate Sieman's 2014 Distribution System Engineering Program, a 16-month accredited training program where he will earn a Certificate in Distribution System Engineering. Nikolai also is preparing to sit the Professional Engineer Exam for the State of New York.
