CREATE AN ENGINEERING ALPHABET

Below you will see the alphabet. Next to each letter is the name and picture of something which has been "engineered." Review your definition of "engineered." Color the letters in the alphabet.

On a separate piece of paper, make your own "engineered" alphabet. Be creative — make the letters unusual-looking. Name something that has been "engineered" for each letter in your alphabet. Then select five of these things and draw a picture of them. Lock around your classroom or your school for ideas to help you.

A: automobile
B: boiler
C: crane
D: drill
E: escalator
F: furnace
G: gears
H: helicopter
I: instrumentation
J: jack
K: locomotive
L: knife
