Course Prerequisites
1) Basic knowledge of fundamental data structures.
2) Basic programming language skills, such as C/C++, Java, Python
If you are not sure you have the proper preparation, you must talk to me before taking this course. Additionally, you should not take this course if you have taken a similar course, such as CS6033 with a ‘B’ or better grade.

Course Description
- Review of basic data structures and mathematical tools.
- Data structures: priority queues, binary search trees, balanced search trees.
- Algorithm design and analysis techniques illustrated in searching and sorting: heapsort, quicksort, sorting in linear time, medians and order statistics.
- Design and analysis techniques: divide and conquer, dynamic programming, greedy algorithms.
- Graph algorithms: elementary graph algorithms (breadth-first search, depth-first search, topological sort, connected components, strongly connected components), minimum spanning trees, shortest paths.
- Brief introduction of complexity and NP-completeness.

Textbook
Cormen, Leiserson, Rivest, and Stein,
ISBN-13: 9780262033848; The paperback international version has ISBN-13 9780262533058. It is known as CLRS.

Office Hours: Tuesday 1pm to 2pm, 2 MetroTech Center, 9.125

Course Work and Grading
Your final grade will be determined roughly as follows:

<table>
<thead>
<tr>
<th>Component</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Homework</td>
<td>10%</td>
</tr>
<tr>
<td>Midterm</td>
<td>40%</td>
</tr>
<tr>
<td>Final</td>
<td>50%</td>
</tr>
</tbody>
</table>
Tentative Schedule

- Week 2: Recurrence and solving methods: iteration, substitution and master theorem

- Week 3: Divide and conquer algorithms, introduction to sorting: insertion sort, bubble sort

- Week 4: Sorting: MergeSort, Heap and HeapSort,

- Week 5: Sorting: quick sort, randomized algorithms, lower bound for comparison sorting, counting sort and radix sort

- Week 6: Order statistics and selection problem, midterm review

- Week 7: Midterm

- Week 8: Hashing and Universal Hashing, Binary search trees

- Week 9: Graph basics, Breath-First Search, Depth-First Search

- Week 10: Directed-acyclic graph and topological ordering, strongly connected components,

- Week 11: Intro to dynamic programming, greedy algorithm

- Week 12: Greedy algorithm, Huffman coding, Minimum Spanning Tree

- Week 13: Single-source shortest paths, all-pairs shortest paths

- Week 14: NP-Completeness and Final Review

- Week 15: Final
