Course Syllabus

Course Objectives:
• Learn the use of algorithmic design strategies: divide-and-conquer, dynamic programming, greedy algorithms, etc.
• Learn and be able to apply fundamental algorithms and data structures for solving other problems: searching, sorting, priority queues, hash tables, balanced search trees, etc.
• Learn to apply algorithmic design ideas to solve new problems.
• Learn to use rigorous mathematics for algorithm design and analysis: observe, state, and prove structural properties that are used for designing efficient algorithms; prove the correctness and analyze the efficiency of algorithms (running time, space complexity, etc.), in the best case/worst case, or expected case, etc.

Prerequisites: You MUST have these to take the course:
(1) CS 5403: Data Structures and Algorithms, or equivalent knowledge of fundamental data structures, and CS 6003: Foundations of Computer Science, or equivalent knowledge of discrete mathematics for computer science.
(2) Familiarity with programming beyond an “Introduction to Programming” class.

We will briefly review the material from prerequisites, but this does NOT replace taking them.

This course is not intended for students who have already taken and passed with a grade of B or above (or equivalent) a comparable algorithms course, graduate or undergraduate; such a course need not cover precisely the same topics.

Homeworks and Exams: There will be 7 regular (approximately weekly) homework assignments (it’s a lot of work!), one Midterm Exam, and one Final Exam (in-class, closed books and limited notes). No formal programming assignments will be given. If you miss an exam without a good reason (documentation is required!), you get zero for it.

Grading Distribution: 7 Homeworks 20%, Midterm Exam 40%, and Final Exam 40%.

Homework Policy: Homeworks are due at the start of the lecture of the due date. No late homeworks are accepted. Feel free to discuss the homeworks and write the answers, in groups. Each group can have at most 3 people. Put the names of ALL the people participating in working on a homework, on the solution handed in. Your name should appear only on one homework at a time. (Do not hand in multiple copies of the same homework solution.) Homeworks handed separately with similar answers will be considered academic dishonesty, see below.

Note: Homeworks are a key component to mastering the course materials and building up your problem-solving ability, and prepare you for the Midterm and Final Exams. It is to your benefit that you think hard and try to solve the homework questions before discussing with others. Do not let your team members do all the homework work for you — this will ruin your chances of passing the exams.

Help/Recitation Sections: The TA will give help/recitation sections to present homework solutions. These sections are in the TA’s weekly office hours (same time and location) in the same week when the corresponding homework is due. We will also announce in NYU Classes (with an email sent out) before each help/recitation section.

Course Policy on Academic Dishonesty on Homeworks: Any homework submitted is expected to be the work of the students taking the course whose names are on the homework. If there is any evidence that the work is not your own (for example: copying from other students in the course, from students not taking the course, from students at another institution, from the Internet, paying someone to do the work, etc.), this will be treated as academic dishonesty. It does not matter who copied from whom. First instance would result in a zero for the entire homework in question. Second instance will result in a grade of F for the course. All instances will be reported to the department and to the Dean of Student Affairs.

NYU School of Engineering Policy on Academic Dishonesty

NYU School of Engineering Policies and Procedures on Excused Absences

Deanna Rayment, deanna.rayment@nyu.edu, is the Coordinator of Student Advocacy, Compliance and Student Affairs and handles excused absences. She is located in 5 MTC, LC240C and can assist you should it become necessary.

Important Dates:

- **First class**: Mon., Jan. 27
- **No class**: Mon., Feb. 17 (Presidents’ Day)
- **No class**: Mon., March 16 (Spring Recess)
- **Midterm Exam**: Mon., March 23
- **Last day to withdraw with a W**: Fri., April 3
- **Last class**: Mon., May 11
- **Final Exam Most Likely**: Mon. May 18 (possibly common time for all sections in the Final Exam week 5/13–5/19)

If you have two final exams at the same time, **report the conflict to your professors as soon as possible. Do not make any travel plans until the exam schedule is finalized.**

Also, please pay attention to notable dates such as Add/Drop, Withdrawal, etc. For confirmation of dates or further information, please contact Susana M. Garcia-Henriquez at sgarcia@nyu.edu.

Tentative Course Outline: The precise order and content, especially the later parts of the course, may change. Please check for updates during the semester.

- **Dictionaries and ordered dictionaries**: Hashing. Balanced search trees (tentatively, AVL-trees, 2-3-4 trees, and more generally \((a, b)\)-trees; possibly red-black trees). B-trees. Augmenting a balanced search tree. [Ch 11, 12, (13), 14, 18]
- **Graph algorithms**: elementary graph algorithms (breadth-first search, depth-first search, topological sort, strongly connected components), minimum spanning trees, shortest paths. Some graph algorithms will be presented later in the course as illustrations for different algorithm design paradigms. [Ch 22, (23, 24, 25)]
- **Dynamic programming**: Rod cutting. Longest common subsequence. Optimal binary search trees. Shortest path problems in graphs. Transitive closure. [Ch 15, 25]
• Greedy algorithms: Activity selection. Huffman coding. Minimum spanning trees. [Ch 16, 23, (24)]
• Randomized algorithms and geometric algorithms (not covered as separate topics).
• Undecidability and fundamentals of NP-completeness (both very briefly; one lecture).

Moses Center Statement of Disability
If you are student with a disability who is requesting accommodations, please contact New York University’s Moses Center for Students with Disabilities at 212-998-4980 or mosescsd@nyu.edu. You must be registered with CSD to receive accommodations. Information about the Moses Center can be found at www.nyu.edu/csdl. The Moses Center is located at 726 Broadway on the 2nd and 3rd floors. Please do this at the start of the semester.
