Graduate Assistants

Perquisites
Grad Status and CS-UY 2134 Data Structures and Algorithms  
Be familiar with Linux, c and Python.

Course Description
This course takes a bottom-up approach to computer networking. After an overview of computer networks and the Internet,  
the course covers the link layers, network layers, routing protocols, transport layers (TCP, UDP), application layers and  
network services. As part of this class you will be given a (virtual) network of four routers and two PCs to configure and  
install network services. See https://github.com/vital2/vital-development/wiki/Computer-Networks-Labs

Topics at the application layer (network services) include client-server architectures, DNS, DHCP and HTTP and Web  
applications. Topics at the transport layer include multiplexing, connectionless transport and UDP, principles or reliable data  
transfer, connection-oriented transport and TCP and TCP congestion control. Topics at the network layer include forwarding,  
router architecture, the IP protocol and routing protocols including OSPF and BGP. Topics at the link layer include multiple- 
access protocols, CSMA/CD, Ethernet, CSMA/CA, wireless 802.11 networks and link layer switches.  
At the end of this course you will have a fully configured and functional IP network.

Course Objectives
This course is a lab-based course using Vital (https://vital.engineering.nyu.edu). Throughout the course the student will:  
1) Design and configure an IP network of four routers and two PCs  
2) Configure routing protocol OSPF  
3) Implement and configure many of the services such as DHCP, DNS.  
4) At the end of this course the student should be familiar with how to design and configure an IP network and  
services.  
5) Be able to diagnosis and fix a misconfigured network.

Course Structure
1) Lectures  
2) Class discussions  
3) Homework (key to success in this course.)  
4) Lab assignments that are done in the Vital Virtual Machines (VMs).  
5) There may also be writing assignments.

Textbooks (Supplied as pdf)
(P) Panvar, TCPIP_Essentials_-_A_Lab-Based_Approach  
(K) Kurose & Ross  
(P) Peterson & Davie, Computer Networks 5th ed.

Grade Calculation
30% Homework
35% Midterm exam
35% Final exam

Course Requirements
1) reading before class
2) class participation
3) assignments
4) exams

Policies:
The exact topics listed in this syllabus are subject to change. As the class progresses, we will gauge where your interests lie and may adjust topics and schedules appropriately.

All homework and laboratory assignments are due on the date indicated on the course website. Late assignments will not be accepted so don’t ask for an extension if you are late. Failure to submit an assignment will result in a grade of zero for that assignment. You will have ample time from the time an assignment is given until it is due. We will not consider a network outage, unavailability of your computer or a computer in the lab (whether a specific computer or any computer in general), or other computer problem that occurred the night before the due date to be a justification for submitting an assignment late. You may assume that there will be one lab and/or homework for each lecture.

In preparing your submissions for homework and laboratory projects you are authorized to use the textbook, your notes, web sites, on-line documentation and any other reference materials to which you have access. You may also discuss the assignment in general with other members of the class or with anyone else whom you believe can be of assistance (including possibly the instructor). The work that you submit for grading must, however, be exclusively your own work. If you do obtain assistance from another individual, you must include an explicit note to that effect in your submission for the assignment. Further all references used must be cited. This means that if you are using various web sites for assistance in laboratory assignments and/or homework you must cite the exact URLs. In addition, any other printed material used must be explicitly cited.

NYU School of Engineering Policies and Procedures on Academic Misconduct

Cheating & Plagiarism
Cheating or plagiarism on a lab or homework will result in a zero and the Computer Science department will track you going forward for subsequent infractions. Cheating on an exam is a much more serious infraction and may result in a lower grade for the course or an F.

Moses Center Statement of Disability
If you are student with a disability who is requesting accommodations, please contact New York University’s Moses Center for Students with Disabilities at 212-998-4980 or mosescsd@nyu.edu. You must be registered with CSD to receive accommodations. Information about the Moses Center can be found at www.nyu.edu/csd. The Moses Center is located at 726 Broadway, New York, NY 10003

NYU School of Engineering Policies and Procedures on Excused Absences – complete policy is found here with associated form:

A. Introduction: An absence can be excused if you have missed no more than 10 days of school. If an illness or special circumstance has caused you to miss more than two weeks of school, please refer to the section labeled Medical Leave of Absence.
B. Students may request special accommodations for an absence to be excused in the following cases:
   1. Medical reasons
   2. Death in immediate family
   3. Personal qualified emergencies (documentation must be provided)
   4. Religious Expression or Practice

Deanna Rayment, deanna.rayment@nyu.edu, is the Coordinator of Student Advocacy, Compliance and Student Affairs and handles excused absences. She is located in 5 MTC, LC240C and can assist you should it become necessary.
The final exam is on December 18, 2020. Final exams for graduate courses will be held on the last day of class. Do not make any travel plans until the exam schedule is finalized. Also, please pay attention to notable dates such as Add/Drop, Withdrawal, etc. For confirmation of dates or further information, please contact Susana M. Garcia-Henriquez at sgarcia@nyu.edu.
