Overview:

The purpose of this course is to provide students a greater appreciation, both conceptual and technical of the uses of relational databases and big data databases and their engineering of financial analytic. The course covers a number of themes and practical problems that combine computer aided data management, data analysis, financial issues and their applications in a data based financial environment.

Schedule of Classes:

<table>
<thead>
<tr>
<th>Week</th>
<th>Topics</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Market Data &amp; JSON</td>
</tr>
</tbody>
</table>
| 2    | Relational Database & Sqlite3  
Term Project: Pair Trading (Part 1) |
| 3    | JSON-Sqlite3 Lab |
| 4    | Big Data and Hadoop  
Term Project: Pair Trading (Part 2) |
| 5    | Big Data Lab: Microsoft Azure Cloud & Hortonworks Hadoop |
| 6    | Python for Finance  
Term Project: Pair Trading (Part 3) |
| 7    | Term Project: Pair Trading (Due) |
| 8    | Final Exam |

Assessment:

The assessment will be done as the following:

- Homework Assignments 20%
- Quizzes 10%
- JSON-Sqlite3 & Big Data Labs, 10%
- Term Project, 20%
- Final Exam, 40%
Textbooks:

Course Topics:

I. Market Data: Due to technical advancement and industry innovations such as high frequency trading, the volume of financial data will continue growing exponentially. Topics covered in this unit:
   o What are Financial Data?
     ▪ Equities: stock quotes, daily open, high, low, close prices, trading volume, VWAP and IPOs.
     ▪ Companies: key company fundamentals, financial statements and ratios, analyst stock recommendations and ratings, analyst earnings estimates, and financial, economic and business news.
     ▪ Mutual Funds & ETFs: historical and daily end-of-day closing NAVs, ETF, open ended mutual funds and money market fund data.
     ▪ Fixed Income & Credit: bond price and yield data, US Treasury and LIBOR-based swap and forward rates, and global interbank interest rates and the official BBA LIBOR.
     ▪ Futures & Options: daily end-of-day prices, quotes, volume and open interest for all options and futures.
     ▪ Forex & Metals: quotes for currency exchange rates, precious metal spot prices, and global currencies pairs.
     ▪ Indices & Markets: index values for more than 10,000 U.S. and international indices, and global economic calendars of scheduled Treasury and economic events and announcements.
   o How are Financial Data Delivered?
     ▪ Delivery frequency: real-time, delayed, conflated, or end of day (EOD).
Delivery method: streaming format, snapshot files or EOD files.
Delivery transportation: broadcast, multicast, satellite, private line, VPN, or Internet.
Delivery format: encoded heavily to optimize performance, or in simple formats to simplify databasing.
Normalization: a vendor collects from sources all around the world and then translates all of those formats into a single format.
Reliability: high availability of data is a primary concern in the financial markets.
Value Added Services: data value can be improved by adding on related services such as listing information, share data, fundamental data, etc.

II. **Relational Database & Pair Trading**: This unit will introduce students the concepts of relational database management systems and relational database model. Students will learn how to use relational database in trading via the pair trading implementation.

Topics covered in this unit:
- Relational Database
  - DBMS
  - Relational Database Model
  - Relational Algebra
  - Normalization
  - E-R Relationship
  - Structured Query Language
- Pair Trading Implementation
  - Restful
  - Sqlite3 Integration
  - Pair Trading System
    - Condition and Assumption
    - Pair Trading Algorithm
    - Database Implementation Details

III. **JSON-Sqlite3** Using libcurl to pull daily and intraday trading data from Unicorn Market Data services in JSON format, parse the market data, create and populate corresponding data structures; and create multiple tables to persistent the market data in a Sqlite3 relational database.

Topics covered in this unit:
- What is JSON?
- JSON Object Syntax
- JSON Examples
- JSON Arrays
- JSON Data Types
IV. **Big Data in Finance:** While the industry structured data is growing in size and scope, it is the world of unstructured data that is emerging as an even larger and more important data source. IBM Big Data Work survey indicates that most financial organizations are currently in the early stages of big data planning and development efforts.

**Topics covered in this unit:**
- What is Big Data?
- Big Data Challenges in Financial Markets
- Structured vs. Unstructured Data
- Main Big Data Technologies & Hadoop
- Harvest Financial Information Using Big Data
  - Hortonworks Sandbox and HDP
  - Aggregating 10 Years of Raw Stock Ticker Data from NYSE
  - Enriching the Data Model with Unstructured Data from Internet
  - Interactive Visualization

V. **Microsoft Azure Cloud & Hortonworks Hadoop:** This section is a hands-on lab for students to practice Big Data database in Microsoft Azure Cloud.

**Topics covered in this unit:**
- Start virtual machines in Microsoft Azure Cloud
- Launch HDP and start Hue
- Create Big Data database
- Connect to your Python program to your Big Data database in Azure Cloud via ODBC
- Code your Python program to analyze data retrieved from your Big Data database

VI. **Python for Financial Data Analysis:** This section will introduce Python with focus on Python packages for numerical and data analysis.

**Topics covered in this unit:**
- Data structure for collections
- 3rd party packages for data analysis
- NumPy – Numerical Python
- SciPy - tools and functions for scientific computing
Letter Grades:

Letter grades for the entire course will be assigned as follows:

<table>
<thead>
<tr>
<th>Letter Grade</th>
<th>Points</th>
<th>Percent</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>4.00</td>
<td>93% and higher</td>
</tr>
<tr>
<td>A-</td>
<td>3.67</td>
<td>90.0 – 92.99%</td>
</tr>
<tr>
<td>B+</td>
<td>3.33</td>
<td>87% - 89.99%</td>
</tr>
<tr>
<td>B</td>
<td>3.00</td>
<td>83% - 86.99%</td>
</tr>
<tr>
<td>B-</td>
<td>2.67</td>
<td>80% - 82.99%</td>
</tr>
<tr>
<td>C+</td>
<td>2.33</td>
<td>77% - 79.99%</td>
</tr>
<tr>
<td>C</td>
<td>2.00</td>
<td>70.0% - 76.99%</td>
</tr>
<tr>
<td>F</td>
<td>.00</td>
<td>69.99% and lower</td>
</tr>

Policies:

Academic Misconduct

A. Introduction: The School of Engineering encourages academic excellence in an environment that promotes honesty, integrity, and fairness, and students at the School of Engineering are expected to exhibit those qualities in their academic work. It is through the process of submitting their own work and receiving honest feedback on that work that students may progress academically. Any act of academic dishonesty is seen as an attack upon the School and will not be tolerated. Furthermore, those who breach the School’s rules on academic integrity will be sanctioned under this Policy. Students are responsible for familiarizing themselves with the School’s Policy on Academic Misconduct.
B. Definition: Academic dishonesty may include misrepresentation, deception, dishonesty, or any act of falsification committed by a student to influence a grade or other academic evaluation. Academic dishonesty also includes intentionally damaging the academic work of others or assisting other students in acts of dishonesty. Common examples of academically dishonest behavior include, but are not limited to, the following:

1. Cheating: intentionally using or attempting to use unauthorized notes, books, electronic media, or electronic communications in an exam; talking with fellow students or looking at another person’s work during an exam; submitting work prepared in advance for an in-class examination; having someone take an exam for you or taking an exam for someone else; violating other rules governing the administration of examinations.

2. Fabrication: including but not limited to, falsifying experimental data and/or citations.

3. Plagiarism: Intentionally or knowingly representing the words or ideas of another as one’s own in any academic exercise; failure to attribute direct quotations, paraphrases, or borrowed facts or information.

4. Unauthorized collaboration: working together on work that was meant to be done individually.

5. Duplicating work: presenting for grading the same work for more than one project or in more than one class, unless express and prior permission have been received from the course instructor(s) or research adviser involved.

6. Forgery: altering any academic document, including, but not limited to, academic records, admissions materials, or medical excuses.

Disability Disclosure Statement

Academic accommodations are available for students with disabilities. Please contact the Moses Center for Students with Disabilities (212-998-4980 or mosecsd@nyu.edu) for further information. Students who are requesting academic accommodations are advised to reach out to the Moses Center as early as possible in the semester for assistance.

Inclusion Statement

The NYU Tandon School values an inclusive and equitable environment for all our students. I hope to foster a sense of community in this class and consider it a place where individuals of all backgrounds, beliefs, ethnicities, national origins, gender identities, sexual orientations, religious and political affiliations, and abilities will be treated with respect. It is my intent that all students’ learning needs be addressed both in and out of class, and that the diversity that students bring to this class be viewed as a resource, strength and benefit. If this standard is not being upheld, please feel free to speak with me.
